## Lypossage

Lypossage cleanses the body of stagnant lymphatic fluid breaks up adhesions under the skin that can contribute to the dimpled, uneven appearance of cellulite. Lypossage also tones the muscles, lifting and firming sagging tissue.

Lypossage is performed on the lower body - buttocks, hips, thighs and lower abdomen, as well as the upper body - arms, face, neck & head.

Circle of Wellness massage therapists are specially trained in this extraordinary hands-on technique and are licensed to practice under the Lypossage name.

## Ionic Foot Detox

This process gives the hydrogen in the water a positive charge. The positive charge in the water attracts the negatively charged toxins and heavy metals in your body. These toxins are then expelled from the body into the water.

## Coolshape

Even though people eat right and exercise, they can still have stubborn areas of fat that refuse to budge. This may be on the stomach, hips, thighs, arms, low back or other places. The CoolShape can target these resistant areas and can help to reduce fatty deposits without having surgery.

Coolshape is designed to perform completely comfortable and painless treatments that are clinically proven to effectively remove fat. The treatment is a silhouette shaping targeted procedure. The equipment uses low ambient temperature to freeze and damage fat cells.

Results can be seen after just one treatment.

## Infrared Sauna

Infrared saunas detoxify the body at a cellular level providing a variety of different health benefits for:

**WEIGHT LOSS  
RELAXATION  
AND MORE...**

**PAIN RELIEF  
ANTI-AGING**

Heating the body enhances blood circulation and promotes oxygenation of body tissues which in turn provides proven relief of aches and pains. Heat also increases energy production which facilitates burning of calories or effortless weight loss. Unlike the traditional

saunas, the infrared saunas' heat is directly absorbed by the skin and penetrates deep within the muscles. This key difference in heating gives it the ability to promote a detoxifying sweat at a much lower ambient temperature.
